Rat Prevention

January bugs and critters are cold and coming in. What can you do?

First if you see or hear critters in the walls or attic place a maintenance call. Owners are responsible for their removal. It is an awful process and if they die in the walls we just have to wait until they decompose, so **prevention** is the key.

- Walk around your home and see if there are any obvious holes that rats can get into the home. Is there a soffit that fell down, wood or fascia that is rotted too much?
- Do you see any holes in the walls or gaps in windows or door that would allow intrusion?
- Look under your sinks, are there any holes in the cabinets? Put copper mesh in these.
- Keep all trash picked up outside. Landscape debris is the perfect habitat for them so clean up the yard. Keep all food in the fridge or microwave. They LOVE pet food so keep this in a container and preferably in the microwave so they can't smell it. Pick up the water bowl overnight

People swear by these: [No Poison Pet Control Aid for Rats and All Bugs](#)

If rats come into the house and the pest control company finds that these preventative measures are the cause, it isn't fair that the owner pay 100% for the removal. You will be responsible for some of the cost.

Since we commemorate Martin Luther King Jr. this month, let's all practice his teachings:

"The time is always right to do what is right."

"I refuse to accept the view that mankind is so tragically bound to the starless midnight of racism and war that the bright daybreak of peace and brotherhood can never become a reality...I believe that unarmed truth and unconditional love will have the final work."
